**DETAILED ACTION**

***Allowable Subject Matter***

1. Claims 11-18 are allowed.

The following is a statement of reasons for the indication of allowable subject matter:

With regard to claim 11, the prior art of records fail to teach or suggest a method of manufacturing a semiconductor apparatus particularly with forming a first conductive type impurity region in respective channel positions of said buried channel type MOS transistor and said surface channel type MOS transistor in **a same step** as in the combinations of claim 11.

With regard to claim 12 or 18, the prior art of records fail to teach or suggest a method of manufacturing a solid state image pickup device particularly with forming a first conductive type impurity region in respective channel portions of said buried channel type MOS transistor and said surface channel type MOS transistor, such that a lowest potential region within said buried channel type first conductive type MOS transistor, in comparison to potentials of other regions of an under portion of a gate of said buried channel type first conductive type MOS transistor is arranged in an area that is at a predetermined depth from a surface of said image pickup device as in the combinations of claim 12 or 18.

The dependent claims 13-17 are allowable for at least the same reason.

Any comments considered necessary by applicant must be submitted no later than the payment of issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure:

- US-2004/0263657: The invention teaches related method of manufacturing a semiconductor apparatus or image pick up device yet fail to teach or suggest particularly with forming a first conductive type impurity region in respective channel positions of said buried channel type MOS transistor and said surface channel type MOS transistor in **a same step** or forming a first conductive type impurity region in respective channel portions of said buried channel type MOS transistor and said surface channel type MOS transistor, such that a lowest potential region within said buried channel type first conductive type MOS transistor, in comparison to potentials of other regions of an under portion of a gate of said buried channel type first conductive type MOS transistor is arranged in an area that is at a predetermined depth from a surface of said image pickup device as in the claimed device.
